Problems in our country and its solution managing system

The website would be about solution to every problems that are stuck with every household, domestic or person to person and peoples residing here in the country. The website is pretty similar to a “food delivery” website but it becomes different when it comes to a point that instead of food deliveries people would help people within a cost. That is, the ones that registers as helpers would have to come to the victim that sent complaint and help them for a price.
